## Lagrangian Mechanics

 Consider an single particle moving with velocity v and subject to a conservative force

Conservative Force

Net Work along closed path is 
$$O$$
 $\oint \vec{F} \cdot d\vec{r} = O$ 
 $E \times : Gravity$ 
 $E = Quivalent | Y : 

 $\vec{\nabla} \times \vec{F} = O$ 
 $Curl of \vec{F} is O.$ 
 $Recall : 

 $\vec{\nabla} \times (\vec{P} \Phi) = O$ 

so there exists some scalar  $\vec{F} : \vec{F} = \vec{V} \Phi$$$ 

F points toward decreasing potential

· For a conservative system, then:

$$KE = T = \frac{1}{Z}mv^{2}$$

$$dT = \hat{F} \cdot d\hat{r} = \hat{F} \cdot \hat{v} dt$$

$$= \frac{d\hat{F}}{dt} \cdot \hat{v} dt = d\hat{F} \cdot \hat{v}$$

$$= m d\hat{v} \cdot \hat{v}$$

$$d\hat{v} \cdot \hat{v} = \frac{1}{Z}d(\hat{v} \cdot \hat{v})$$

$$dT = \frac{1}{Z}md(\hat{v} \cdot \hat{v})$$

$$dT = \frac{1}{Z}md(\hat{v}^{2})$$

$$T = \frac{1}{Z}mv^{2}$$

$$U = U(\hat{F})$$

$$E = T + U, \quad dE = 0$$

- · Consider instead the quantity T U
  - Why would we do this????
  - Stay with me

$$J = T - U$$

$$= \frac{1}{Z} m v^{2} - U(\hat{r})$$

$$J = \frac{1}{Z} m (\dot{x}^{2} + \dot{y}^{2} + \dot{z}^{2}) - U(x, y, z)$$

$$\frac{\partial J}{\partial x} = -\frac{\partial U}{\partial x} = F_{x} \qquad (1)$$

$$\frac{\partial J}{\partial \dot{x}} = \frac{\partial T}{\partial \dot{x}} = m\dot{x} = P^{x} \qquad (2)$$

$$F_{x} = \frac{d}{dt} P_{x} = \frac{d}{dt} \left( \frac{\partial f}{\partial \dot{x}} \right)$$

$$F_{x} = \frac{\partial f}{\partial x} = \frac{\partial f}{\partial x} = \frac{d}{dt} \left( \frac{\partial f}{\partial \dot{x}} \right)$$

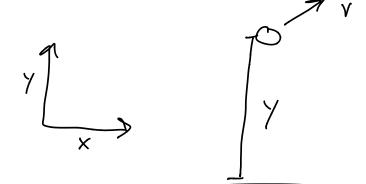

Euler-Lagrange Equations

$$\frac{\partial f}{\partial x} = \frac{\partial f}{\partial x} =$$

f = T - U f = Lagrangian''

Simple Example

Projectile Motion

$$T = \frac{1}{z}mv^{2} = \frac{1}{z}m(\dot{x}^{2}+\dot{y}^{2})$$

$$U = mgy$$

$$\int = \frac{1}{z}m(\dot{x}^{2}+\dot{y}^{2}) - mgy$$

$$\frac{\partial f}{\partial x} = \frac{d}{dt}(\frac{\partial f}{\partial x})$$

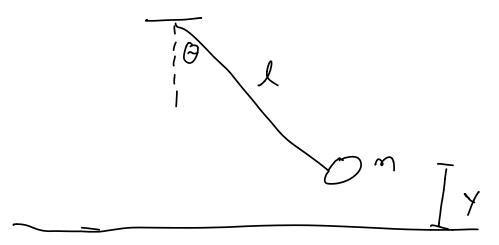

$$0 = \frac{d}{dt}(m\dot{x}) \rightarrow m\ddot{x} = 0$$

$$\frac{\partial f}{\partial y} = \frac{d}{dt}(\frac{\partial f}{\partial y})$$

$$-mg = \frac{d}{dt}(m\dot{y})$$

$$m\ddot{y} = -mg \qquad \ddot{y} = -g$$

Independent of coordinate system

$$T = \frac{1}{z} m v^2 = \frac{1}{z} m (\vec{r} \cdot \vec{r})$$

$$\dot{\vec{r}} \cdot \dot{\vec{r}} = l^2 \dot{\Theta}^2 \cos \Theta + l^2 \dot{\Theta}^2 \sin^2 \Theta$$

$$T = \frac{1}{2} m l^2 \dot{\theta}^2$$

$$y = -l\cos\Theta - l = -l(\cos\Theta - 1)$$

$$y = l(1 - \cos\Theta)$$

$$U = mgl(1 - cos\Theta)$$

$$\int_{-\infty}^{\infty} = T - U$$

$$\int_{-\infty}^{\infty} = \frac{1}{z}ml^{2}\dot{\Theta}^{2} - mgl(1 - cos\Theta)$$

$$U) \frac{\partial f}{\partial \Theta} = \frac{d}{dt}(\frac{\partial f}{\partial \dot{\Theta}})$$

$$mglo(\frac{cos\Theta}{\partial G}) = \frac{d}{dt}(ml^{2}\dot{G})$$

$$-mylsin\Theta = ml^{2}\ddot{\Theta}$$

$$\dot{\Theta} = -\frac{3}{2}sin\Theta$$

$$U = mg(-l-y)$$

$$T = \frac{1}{2}m(x^2+y^2)$$

$$J = T - U$$

$$\frac{\partial J}{\partial x} = \frac{J}{\partial x}(\frac{\partial J}{\partial x})$$

$$\frac{\partial J}{\partial y} = \frac{J}{J}(\frac{\partial J}{\partial y})$$

x + y are not independent  $y = \sqrt{12-x^2}$ 

Why Use Lagrangian? Sometimes much easier!

$$m_1$$
 $m_2$ 

$$\hat{\Gamma}_{1} = L_{1} \sin \Theta_{1} \hat{\chi} - L_{1} \cos \Theta_{1} \hat{\gamma}$$

$$\hat{\Gamma}_{2} = (L_{1} \sin \Theta_{1} + L_{2} \sin \Theta_{2}) \hat{\chi}$$

$$- (L_{1} \cos \Theta_{1} + L_{2} \cos \Theta_{2}) \hat{\gamma}$$

$$\hat{L} = T - U$$

$$T = T, + Tz$$

$$T_{1} = \frac{1}{z} m_{1} \dot{c}_{1} \cdot \dot{c}_{1}$$

$$\dot{c}_{1} = l_{1} \dot{o}_{1} \cos \theta \dot{x} + l_{1} \dot{o}_{1} \sin \theta_{1} \dot{y}$$

$$\dot{c}_{1} = l_{1} \dot{o}_{1} \cos \theta \dot{x} + l_{2} \dot{o}_{1} \sin \theta_{1} \dot{y}$$

$$T_{2} = \frac{1}{z} m_{2} \dot{c}_{2} \cdot \dot{c}_{2}$$

$$\dot{c}_{2} = l_{1} \dot{o}_{1} \cos \theta_{1} + l_{2} \dot{o}_{2} \cos \theta_{2} \dot{x}$$

$$-(-l_{1} \dot{o}_{1} \sin \theta_{1}, -l_{2} \dot{o}_{2} \sin \theta_{2}) \dot{y}$$

$$\dot{\vec{r}}_z = (l, \dot{\theta}, \cos{\theta}, + l_z \dot{\theta}_z \cos{\theta}_z) \dot{\vec{x}}$$

$$+ (l, \dot{\theta}, \sin{\theta}, + l_z \dot{\theta}_z \sin{\theta}_z) \dot{\vec{y}}$$

$$\frac{1}{2} = \frac{2}{1}, \frac{2}{0}, \cos \theta, + \frac{2}{2}, \frac{2}{0}, \cos \theta_{2}$$

$$+ 2l, l_{2}\theta, \theta_{2}\cos \theta, \cos \theta_{2}$$
